Module Synopsis	s to be printed in the catalogue.			
This module is designed to enable students to engage deeply with the concepts and the international research that have informed recent curriculum development in Wales. It will enable students to consider curriculum design and realisation in different contexts, including their own. The module will equip students to evaluate different curriculum design approaches and to critically appraise the various implementation processes that accompany curriculum change within education institutions and systems.				
This module is op	tional for all students but becomes core once selec	cted.		
Is there a placement component to the module? Please provide details.			No	
Will the module be delivered in collaboration with another organisation? Please provide details.All institu			tions	
What percentage of the module will be taught in Welsh? Please outline examples, e.g. mentorship or personal tutoring, etc)?100%				
Module Aims				
This module equips students with an understanding of the purpose and principles of curriculum design in relation to effective teaching, learning and leadership at all levels. The module aims to develop in students a critical understanding of the strategies needed for changing and implementing a curriculum, for example, the place of subsidiarity. This module will enable professionals to apply their knowledge and understanding of curriculum development in their own context and to compare this with curriculum design and realisation in other settings.				
Module Intended	Learning Outcomes			

By the end of the module the student should be able to:

- 1. Analyse and evaluate different approaches to curriculum design in relation to teaching, learning and leadership.
- 2. Critically engage with curriculum development philosophies, programmes and policies in other international jurisdictions.
- 3. Critically analyse strategies for change in relation to curriculum realisation and implementation.
- 4. Evaluate different curriculum design approaches and to critically appraise the various implementation processes that accompany curriculum change within education institutions and systems

Relevant Programme Outcomes

K1. An in-depth, systematic and advanced knowledge of the complexity and multi-faceted nature of education, both in their own context and beyond.

K2. A critical evaluation of current policy, theoretical and practice-based perspectives at a local, national and international level

K3. A critical reflection and interpretation, synthesis and application of knowledge and research in their own professional contexts.

K4. A comprehensive, critical evaluation and synthesis of relevant literature.

K6. Originality in the design, application and evaluation of appropriate approaches to professional enquiry and critically reflect on these as a vehicle for professional learning.

K8. The ability to communicate accurately and clearly to a wide range of audiences.

S1. Apply engagement with theory and evidence to develop new personal and professional perspectives of own professional practice.

S2. Arrive at evidence-informed conclusions relating to complex issues in education in general, and in their area of professional practice in particular.

S5. Critically evaluate literature and evidence to progress their own skills of enquiry.

S8. Develop clear and appropriate writing styles in Welsh or English, which are accessible to a range of audiences.

S9. Apply their knowledge, understanding and transferable skills to engage with, support and where appropriate, to influence others.

Transferable/Employability/Graduate Skills

I = included in module content; A = included in module assessment; N/A

Master's degrees are awarded to students who have demonstrated:

1. A systematic understanding of knowledge, and a critical awareness of current problems and/or new insights, much of which is at, or informed by, the forefront of their academic discipline, field of study or area of professional practice.

Students will be assessed for their knowledge and critical awareness relating to the module topic. All students will be expected to relate this to their own practice.

- 2. A comprehensive understanding of techniques applicable to their own research or advanced scholarship, and;
- 3. Originality in the application of knowledge, together with a practical understanding of how established techniques of research and enquiry are used to create and interpret knowledge in the discipline.

Students will be introduced to, and expected to engage critically with, the core literature, evidence and techniques for enquiry in relation to the module topic. This is in order to demonstrate the appropriate application of research and scholarship in their own practice and their critical evaluation of the same, in order to arrive at an ever-deeper understanding of the topic as it applies to professionals.

- 4. Conceptual understanding that enables the student:
 - to evaluate critically current research and advanced scholarship in the discipline
 - to evaluate methodologies and develop critiques of them and, where appropriate, to propose new hypotheses.

Students will be supported to build skills in relation to critical analysis and develop a critical appreciation of the evidence they have engaged with in order to conceptualise and apply the knowledge in this topic to their own practice, and to develop their own theories of action in relation to the topic.

Typically, holders of the qualification will be able to:

1. Deal with complex issues both systematically and creatively, make sound judgements in the absence of complete data, and communicate their conclusions clearly to specialist and non-specialist audiences.

Students will be encouraged to understand that there are no 'right answers' in the heir discipline and that effective professional practice involves making judicious decisions on their own account, using evidence to guide their choices and using reflection to evaluate them. In the course of their practice, students will be encouraged to ensure that their use of their growing knowledge base enables them not only to develop as professionals, but also to work with peers, learners, parents and carers, ensuring that they can communicate effectively with a range of audiences.

2. Demonstrate self-direction and originality in tackling and solving problems and act autonomously in planning and implementing tasks at a professional or equivalent level.

Assessments are all designed to require students to show how they are able to problematise their practice, and how they can use evidence, action planning and reflection to solve problems both autonomously and in collaboration with peers.

3. Continue to advance their knowledge and understanding, and to develop new skills to a high level. All module content is intended to challenge students to reconsider what they think they know, to adopt critical mindsets and to be ready to adapt what they do, in light of the new knowledge and understanding they encounter during the module.

- 4. And holders will have the qualities and transferable skills necessary for employment requiring:
 - the exercise of initiative and personal responsibility
 - decision-making in complex and unpredictable situations
 - the independent learning ability required

Throughout the module, students will be encouraged to:

 a. Form conclusions about their own practice such that they become more confident in making decisions both with, and in the absence of all of the information they need. b. Be reflective such that they can take responsibility for the decisions they make. c. Understand where they can turn to in order to further inform their decision-making.
